Security Intelligence Report

SESSION · 0f0baac3-1408-4cb2-8f0f-51f2eda9b215 · FASTMCP DEMO SERVER

IVINCHRIS\ivsan · WINDOWS 11
16 FEB 2026 · 10:34–10:45 UTC

ANALYSIS COMPLETE

01 · SYSTEM HEALTH OVERVIEW

40 SNAPSHOTS · 5-SECOND INTERVAL · 10m 40s TOTAL

PEAK RAM — CRITICAL
95.1%
14.54 GB / 15.3 GB
Only 760 MB free

AVG CPU — MODERATE
32.9%
Peak: 42.1% at T+0s
Low: 24.8% at T+149s

NET ERRORS — PERFECT
0
0 drops · 0 loss
100% reliability

EXPOSED PORTS — HIGH RISK
28
On 0.0.0.0 / :::
2 CRITICAL · 3 HIGH

CONNECTIONS — MONITORED
73
18 ESTABLISHED
40 LISTEN · 8 TIME_WAIT

OVERALL GRADE — ACTION REQ.
C+
Action required
Memory critical

CPU & Memory Utilization — Full Session Timeline

40 SNAPSHOTS · 16s RESOLUTION
10:34:59 → 10:45:39 UTC

Category Health Grades — Session Assessment

COMPOSITE SCORING

MEMORY	CPU	NETWORK	SECURITY	OVERALL
D	B	A	C	C+
92–95% sustained	Avg 32.9%	0 errors · 0 drops	28 persistent alerts	Immediate action required
Critical pressure	Acceptable range	Perfect reliability	0 resolved	

02 · PERFORMANCE ANALYSIS

CPU · MEMORY · PROCESS BREAKDOWN

Top Processes — Memory Consumption (MB)

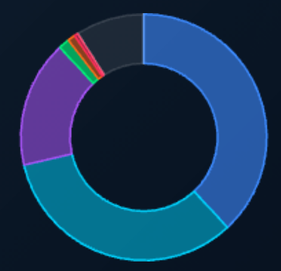

PEAK RSS · SESSION MAX

Health Radar

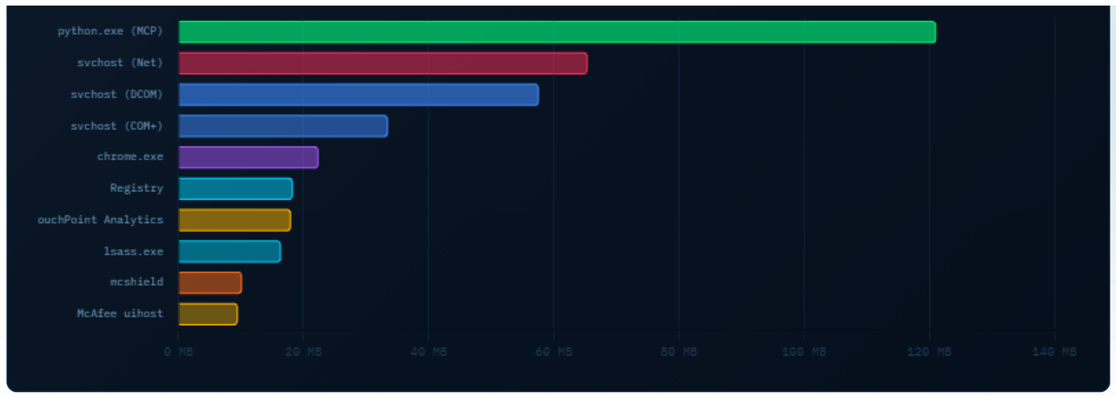

VS TARGET

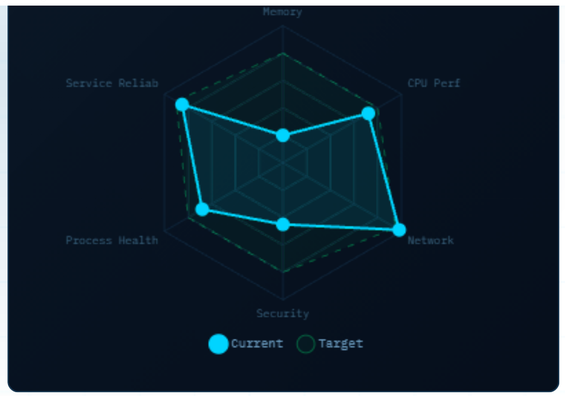

Memory Breakdown

15.3 GB TOTAL

Total RAM 15.3 GB

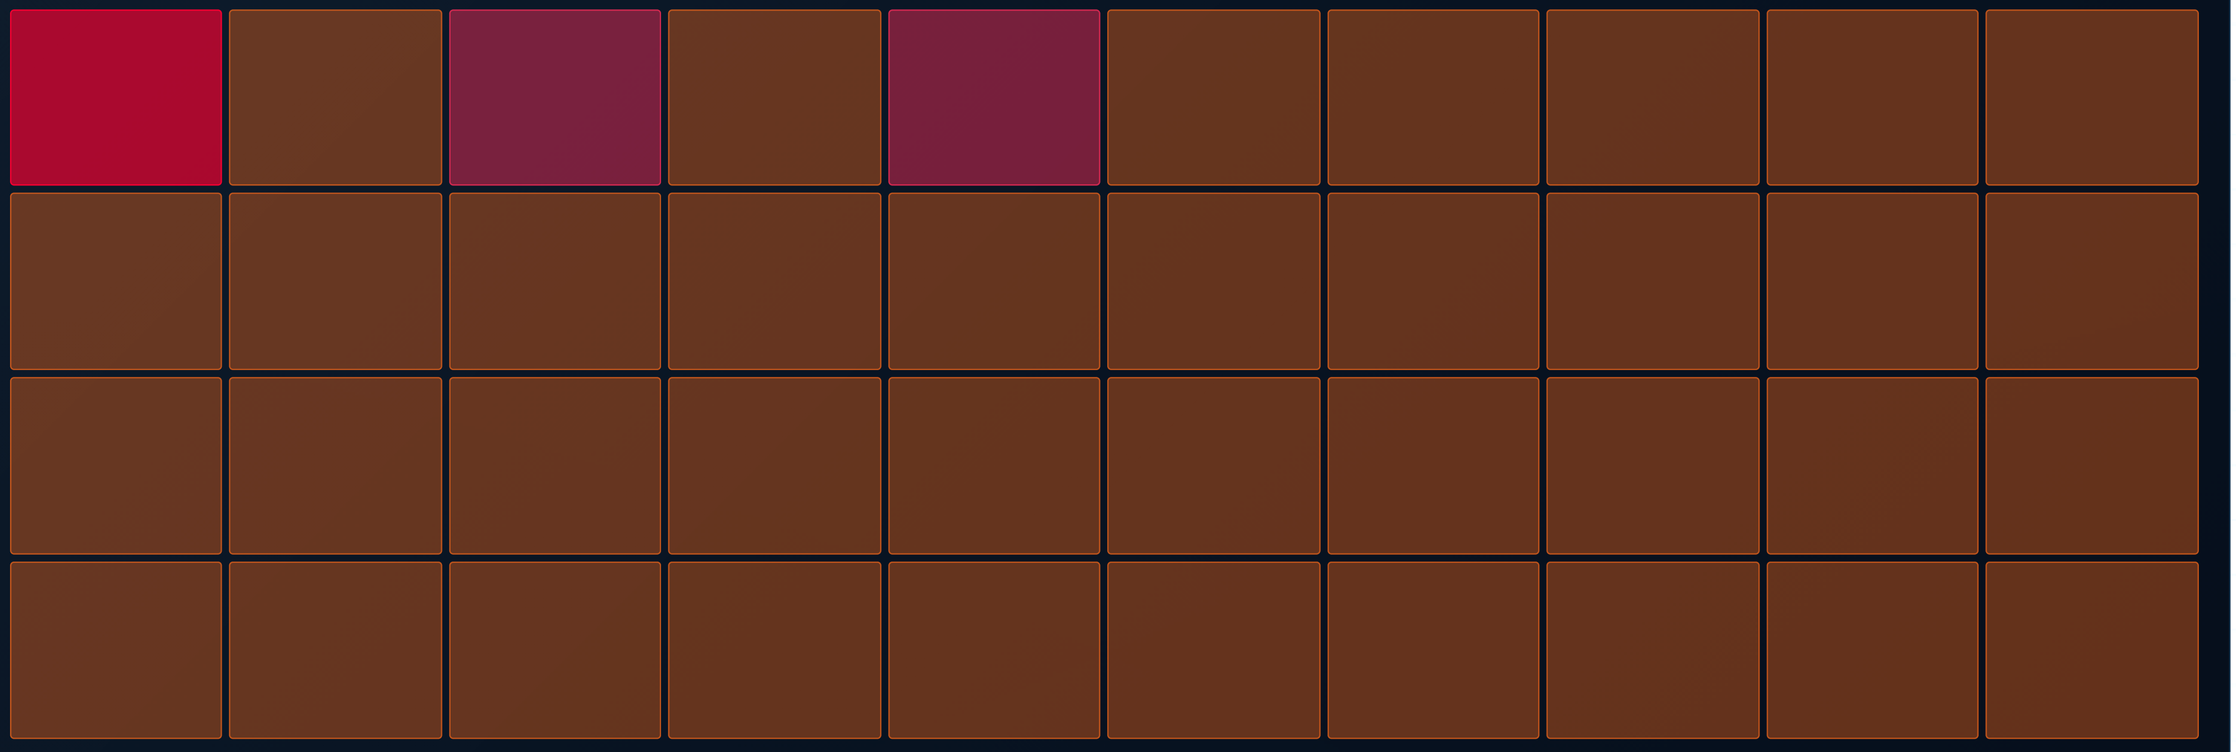

Peak Used	14.54 GB (95.1%)
Min Free	760 MB
Best Free	1.42 GB (at T+85s)
Pressure	CRITICAL

Memory Pressure Heatmap — All 40 Snapshots

HOVER FOR DETAILS · EACH CELL = 1 SNAPSHOT

MEMORY PRESSURE SCALE: <85% 85–90% 90–93% 93–95% >95%

Memory by Process Category

ESTIMATED DISTRIBUTION

Windows Services (19× svchost)	~3.2 GB
User Apps (Chrome, Postman, Thonny, Edge)	~2.8 GB
System Core (kernel, lsass, Registry)	~1.4 GB
Cached / Standby Pages	~6.7 GB
python.exe — MCP Server (PID 2652)	121 MB
Security Tools (Quick Heal ×5 + McAfee)	~85 MB
Remote Tools (AnyDesk + WSL PulseAudio)	~40 MB

CPU Phase Analysis

3-PHASE DETECTION

Phase 1 · Init (T+0s) 42.1% peak

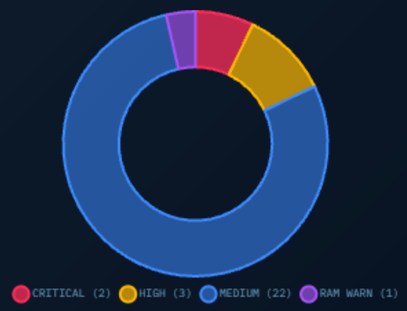

Phase 2 · Oscillate (T+20–100s)	25–41% swing
Phase 3 · Steady (T+100s–end)	24.8–35% stable
Session Average	32.9%
Session Low	24.8%
Trend	↓ Stabilizing

03 · SECURITY POSTURE

THREAT ANALYSIS · PORT EXPOSURE · RISK MATRIX

Security Alert Distribution & Persistence

28 ALERTS · 100% PERSISTENT · 0 RESOLVED

CRITICAL (2)	SMB 445, RPC 135
HIGH (3)	AnyDesk, Port 9095, PulseAudio
MEDIUM (22)	Ephemeral RPC/SVC
RAM WARN (1)	>90% threshold
First detected	T+0s (Snapshot 1)
Last detected	T+640s (Snapshot 40)
Remediation rate	0%
Alert trend	Flat / No change

Threat Risk Matrix — Likelihood × Impact

5×5 MODEL

Mem Crash	High / Critical	Ransomware	Med / Critical
Remote Access	Med / High	Net Degrad	Low / Med

Network Exposure Map — Ports Listening on All Interfaces (0.0.0.0 / :::)

27 EXPOSED · PERSISTENT ACROSS ALL 40 SNAPSHOTS · 0 CLOSED

PORT	SERVICE	PROCESS	PID	INTERFACE	ATTACK VECTOR	CVE / THREAT	RISK
445	SMB / NetBIOS	System	4	0.0.0.0 + :::	Ransomware · Lateral movement · WannaCry	CVE-2017-0144 EternalBlue	CRITICAL
135	RPC Endpoint Mapper	svchost.exe	2000	0.0.0.0 + :::	Remote code execution · DCOM abuse	MS03-026 · DCOM RPC	CRITICAL
7070	AnyDesk Remote Access	AnyDesk.exe	6304	0.0.0.0 + :::	Unauthorized remote control · Data exfil	CVE-2024-12754	HIGH
9095	Unknown (System)	System	4	0.0.0.0 + :::	Unidentified service · Potential backdoor	Unclassified	HIGH
16001	PulseAudio (WSL Kali)	pulseaudio.exe	45788	0.0.0.0 + :::	WSL audio bridge network-accessible	Audio stream intercept	HIGH
4713	PulseAudio Control	pulseaudio.exe	45788	0.0.0.0 + :::	Audio subsystem exposed from WSL instance	—	MEDIUM
15611	Postman API Server	Postman.exe	27600	0.0.0.0 + :::	Dev API tool globally accessible	—	MEDIUM
5040	Unclassified svchost	svchost.exe	3860	0.0.0.0	Unidentified Windows service component	—	MEDIUM
49664–49727	Dynamic RPC ports	lsass / spoolsv / wininit	Various	0.0.0.0 + :::	High-port RPC range all exposed externally	RPC range exploit	MEDIUM
1688	KMS Licensing	SLsvc.exe	Various	:::	Windows activation service exposed	—	INFO

Packets Recv	~638,440
Packet Errors	0
Packet Drops	0
Error Rate	0.000%
Reliability Score	100%
Active interfaces	eth0 · lo · wsl0
External IPs seen	34.225.214.106 (Anthropic)

05 · SESSION EVENT TIMELINE

10:34:59 → 10:45:39 UTC · CHRONOLOGICAL

10:34:59 UTC · T+0s · SNAPSHOT 1/40
⚡ Session Start — Peak Memory Event
RAM: 95.1% (14.54 GB) · CPU: 42.1% · 28 security alerts active immediately on session start. System under maximum observed pressure.

10:35:18 UTC · T+19s · SNAPSHOT 2/40
📉 CPU Drops — System Stabilizing
CPU: 42.1% → 29.9% (−12.2% drop) · RAM: 92.1% · Network clean · Background task completed or yielded.

10:35:34 UTC · T+35s · SNAPSHOT 3/40
🔄 CPU Oscillation — Background Scanning
CPU rebounds to 40.8% · RAM: 93.2% · Consistent with Quick Heal real-time monitoring cycle firing.

10:36:08 UTC · T+69s · SNAPSHOT 5/40
🔵 claude.exe External Connection
claude.exe (PID 17728): ESTABLISHED → 34.225.214.106:443 · Confirmed Anthropic API server · Normal operation.

10:36:24 UTC · T+85s · SNAPSHOT 6/40
✅ Memory Low-Point — Brief Relief
RAM: 90.8% (13.88 GB) — best reading of entire session · 1.42 GB free · CPU: 38.8% · Window closed quickly.

10:37:28 UTC · T+149s · SNAPSHOT 10/40
📊 CPU Reaches Session Low
CPU: 24.8% — lowest reading of session. RAM: 92.3%. System enters steady-state operation phase. All 28 alerts still persistent.

10:38:00–10:42:00 UTC · SNAPSHOTS 11–30
📊 Extended Steady Operation Phase
CPU: 25–35% (oscillating) · RAM: 91–93% · Network: consistent · Zero new services started. Zero alerts resolved. Pattern fully stable.

10:42:00–10:45:39 UTC · SNAPSHOTS 31–40
🔁 Final Phase — No State Changes
All metrics stable at baseline. Network cumulative: ~2 MB sent, ~1.8 MB received. No new alerts. No port changes. Status quo confirmed.

10:45:39 UTC · T+640s · SESSION END
✅ Recording Stopped
40/40 snapshots captured successfully. All data persisted to D:\Ivin\Sysfore\... No anomalous events at session termination.

POST-SESSION PROJECTION
⚠️ Predictive: 40% Probability Memory Crash

10:36:57 UTC · T+118s · SNAPSHOT 8/40

📈 python.exe Memory Growth Tracked

MCP Server: 114.6 MB → 121.1 MB (+6.5 MB). Consistent growth pattern. If trend continues +24h → potential 300+ MB footprint.

If no action taken: 40% probability RAM hits ≥98% within 1–2 hours based on trend. python.exe growth rate suggests OOM risk within 6–12 hours of continuous run.

06 · REMEDIATION PLAYBOOK

PRIORITY-ORDERED ACTIONS · ESTIMATED IMPACT

IMMEDIATE · < 1 HOUR · MEMORY

Free RAM: Close Non-Essential Applications

Close Chrome tabs (>3), WPS Cloud, Postman when idle. Expected relief: 800MB–1.5GB → target RAM below 85%. This is the single fastest impact action available.

URGENT · < 24 HOURS · SECURITY CRITICAL

Firewall: Block SMB Port 445 & RPC Port 135 from External

Add Windows Defender Firewall inbound rules restricting ports 445 and 135 to 192.168.x.x subnet only. This eliminates EternalBlue/WannaCry attack surface immediately. Run: netsh advfirewall.

URGENT · < 24 HOURS · SECURITY HIGH

Audit & Restrict AnyDesk Remote Access

Verify AnyDesk (port 7070) is genuinely required. If yes: configure access control to LAN-only in AnyDesk Settings → Security. If not needed: uninstall. Risk: unauthorized full remote control.

URGENT · < 24 HOURS · SECURITY HIGH

Investigate Port 9095 — Unknown System Service

Run: netstat -b | findstr 9095 and tasklist /FI "PID eq 4" for details. Unknown port on System (PID 4) on all interfaces is a high-priority investigation item — potential covert channel.

SHORT-TERM · < 1 WEEK · SECURITY

Consolidate Security Software — Remove Duplicate AV

Running Quick Heal (5 processes) + McAfee WebAdvisor simultaneously causes ~85 MB overhead and AV conflicts. Choose one, uninstall other. Also frees ~3–5% CPU from redundant scanning.

SHORT-TERM · < 1 WEEK · SECURITY

Restrict WSL PulseAudio Ports 4713 + 16001

Edit /etc/pulse/default.pa in WSL Kali instance. Change load-module module-native-protocol-tcp to bind only to 127.0.0.1. Eliminates external audio subsystem exposure.

MEDIUM-TERM · 1–4 WEEKS · INFRASTRUCTURE

Upgrade RAM: 16 GB ⟶ 32 GB

Current 16 GB is demonstrably insufficient for the active workload (python dev + Chrome + Postman + security tools). A 32 GB upgrade eliminates the #1 risk driver at a one-time hardware cost.

LONG-TERM · ONGOING · OPERATIONS

Deploy Continuous Monitoring + Automated Alerting

Schedule FastMCP recordings on a cron/task scheduler. Set automated alerts at RAM ≥85% and on new port exposure. Consider integrating with a SIEM for persistent security visibility.
